

# Governor Carney Opts-In to Federal Plan to Improve Broadband Network for First Responders

Delaware's approval allows FirstNet to move forward with plan to build communications network for emergency personnel

WILMINGTON, Del. – Governor John Carney signed a letter on Friday opting into a federal [First Responder Network Authority](#) (FirstNet) plan to build a wireless broadband network intended to improve communications for first responders across the State of Delaware.

The FirstNet plan would allow Delaware police agencies, fire and EMS responders to communicate more effectively by prioritizing their cellular phone calls and data requests on the network. Governor Carney's decision to opt-in allows FirstNet to move forward in building out a broadband network that, if implemented, would allow for efficient communications among emergency responders.

“Our first responders need access to state-of-the-art technology to communicate and respond effectively during emergency situations,” said **Governor Carney**. “This is only a first step, but this plan has real potential to prioritize communications among law enforcement agencies, fire and EMS personnel, and help our first responders protect the lives of Delawareans across our state.”

“During a critical incident or disaster, cellular

communications are of paramount importance to our first responders,” said **Robert Coupe, Secretary of the Delaware Department of Safety and Homeland Security**. “We are excited by the opportunity presented by this FirstNet plan, which would ensure that first responders have the priority access they need to deliver emergency services to the citizens of Delaware.”

“In addition to the potential benefits opting in to FirstNet can provide to our public safety personnel, this decision also helps us to advance our priority of expanding broadband options in rural, underserved areas of our state,” said **James Collins, Chief Information Officer at the Delaware Department of Technology and Information**.

FirstNet is an independent authority within the U.S. Department of Commerce. Authorized by Congress in 2012, its mission is to develop, build and operate the first nationwide, high-speed, broadband network that equips first responders to save lives and protect U.S. communities. FirstNet will build, operate and maintain a secure wireless broadband communications network at no cost to the state.
