

Wastewater, Surface Water and Drinking Water Planning Grant Proposals Now Being Accepted by DNREC, DPH

State government agencies, county and municipal governments, and conservation districts can now submit proposals to DNREC and the Delaware Division of Public Health to receive matching grants for wastewater, surface water and drinking water project planning. Proposals must be received by 4:30 p.m., Tuesday, Sept. 22, 2020.

Eligible projects include planning, preliminary engineering and feasibility analysis of wastewater and/or drinking water projects; stormwater retrofits; green technology practices; stream and wetland restoration projects; small watershed studies; master surface water and drainage plans; and other source water pollution control projects.

Grant applications of up to \$50,000 will be considered with a one-to-one cash match requirement. Up to 10 percent of the grant funds may be used for administrative costs. There is an annual cumulative grant award cap of \$100,000 per successful applicant per fiscal year for wastewater and surface water planning grants. Drinking water planning grants can be for any amount, provided funds are available.

The Wastewater, Drinking Water, and Surface Water Matching Planning Grant programs are set-asides in the state's Clean Water and Drinking Water Revolving Fund. Projects will be recommended for funding by the Delaware Water Infrastructure Advisory Council (WIAC) through a competitive grant process.

- Wastewater Planning Grants assist with wastewater infrastructure project planning and design necessary to

submit a loan application for funding consideration. For project guidelines and an application, visit [Wastewater Matching Planning Grant](#).

- Surface Water Planning Grants support projects and activities that focus on reducing surface water runoff and improving water quality in impaired watersheds. For project guidelines and an application, visit [Surface Water Matching Planning Grant](#).
- Drinking Water Planning Grants help municipal water systems prepare for large, often-costly projects such as troubleshooting source water quality and proposing solutions, reconfiguring water plants to optimize treatment, and determining water main size and locations, among other activities. For project guidelines and an application, visit [Drinking Water Matching Planning Grant](#).

About DNREC

The Delaware Department of Natural Resources and Environmental Control protects and manages the state's natural resources, protects public health, provides outdoor recreational opportunities and educates Delawareans about the environment. The Division of Watershed Stewardship develops and implements innovative watershed assessment, monitoring and implementation activities. For more information, visit the [website](#) and connect with DNREC on [Facebook](#), [Twitter](#) or [LinkedIn](#).
